

The rank of adjacent matrices

$$\mathbf{W} = \sum_{i=1}^r \sigma_i \mathbf{u}_i \mathbf{v}_i^\top = \sigma_1 \begin{bmatrix} | \\ \mathbf{u}_1 \\ | \\ \vdots \end{bmatrix} \left[\frac{\mathbf{v}_1^\top}{\mathbf{v}_2^\top} \frac{\mathbf{v}_2^\top}{\mathbf{v}_3^\top} \dots \right] + \sigma_2 \begin{bmatrix} | \\ \mathbf{u}_2 \\ | \\ \vdots \end{bmatrix} \left[\frac{\mathbf{v}_1^\top}{\mathbf{v}_2^\top} \frac{\mathbf{v}_2^\top}{\mathbf{v}_3^\top} \dots \right] + \dots$$

Singular value decomposition (SVD)

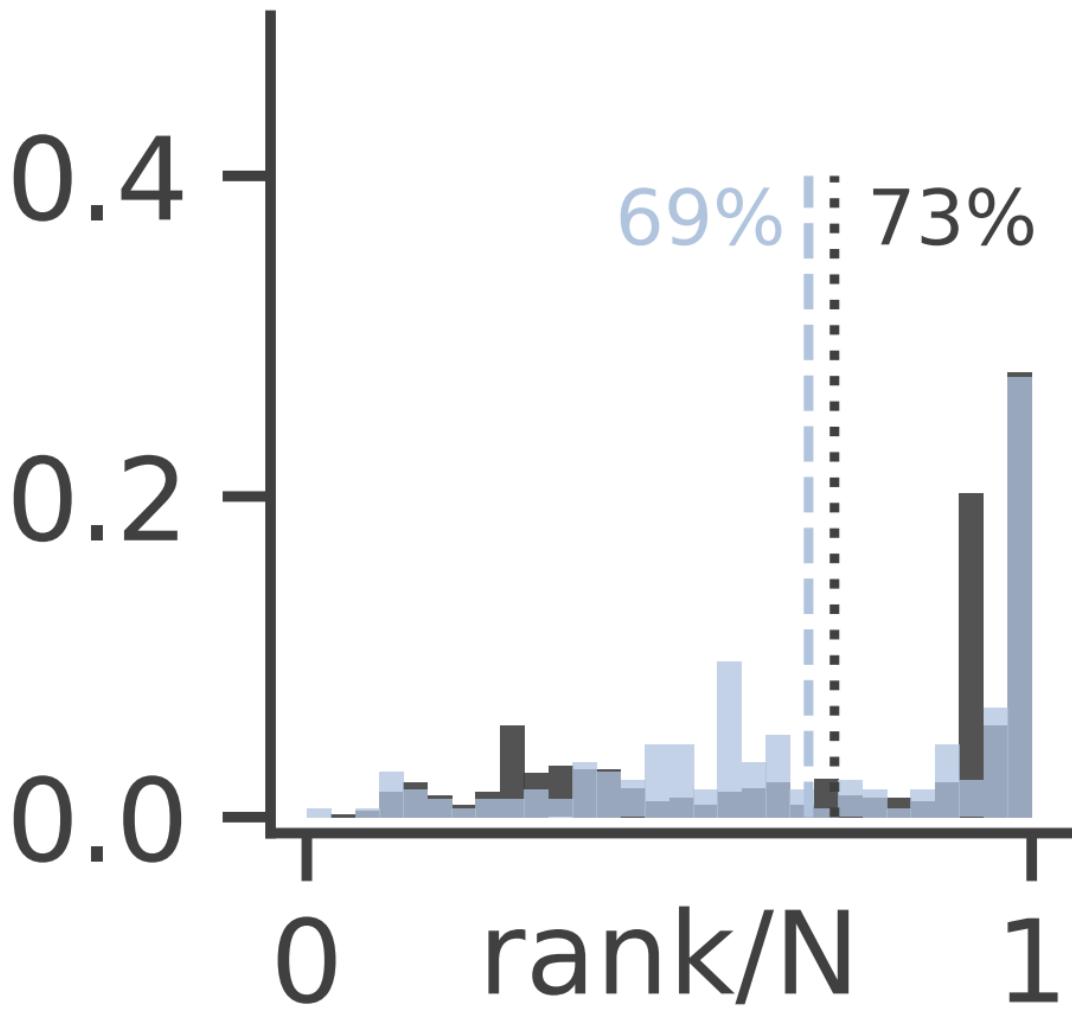

W
Real matrix

=
 U
Orthogonal matrix

σ_1 ...
 σ_r 0 ... 0
 V^T
Diagonal matrix
Orthogonal matrix

Rank r of a matrix

- ▷ number of linearly independent rows/columns
- ▷ dimension of the vector space generated by its rows/columns
- ▷ number of nonzero singular values
