## Network models

## Why?

- $\triangleright$  Mathematical representation  $\rightarrow$  analytical results and predictions.
- ▶ Identify the mechanisms behind a set of topological properties.
- Disentangle the effect of various topological properties (e.g. assortative mixing vs. clustering on the percolation threshold [1]).
- ▶ Identify significant patterns of connection in real networks (i.e. null models).
- > Perform in silico controlled experiments (e.g. simulation of epidemic spreading).
